PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 2+ years of professional experience across internships and full-time roles, building product features end-to-end—from data modeling to polished, user-facing interaction behaviors—using TypeScript, React, Next.js, Node.js, Rust, PostgreSQL, Redis, Docker, and AWS. Track record of owning features from conception through continuous deployment and post-launch iteration across SaaS, fintech, and blockchain products. Partners closely with UI designers and product managers in Agile/Scrum teams, champions engineering quality through code reviews and testing, and actively leverages AI tools to ship user-focused, high-performance software.

EDUCATION

Concordia University — B.S. in Computer Science, Montreal, QC April 2026

Relevant Coursework: Data Structures & Algorithms, Database Design, Artificial Intelligence, Operating Systems, Information Security, Multicore Programming, Object-Oriented Programming, Software Engineering

PROFESSIONAL EXPERIENCE

Full-Stack Software Developer, Webisoft — Montreal, QC Dec 2025 – Present

- Owned blastr.fun end-to-end, from data modeling through launch and post-launch iteration—a production Solana meme-coin launchpad serving 1,000+ users—building a pump.fun-style virtual AMM in Rust/Anchor with constant-product bonding-curve math, slippage protection, and configurable creator/protocol fee splits, deployed via Docker on AWS.
- Built a typed TypeScript SDK adopted by 5+ internal engineers with deterministic PDA derivation and atomic create-and-buy instructions, empowering teammates by reducing integration time from days to hours and accelerating partner onboarding by ~60%.
- Crafted a Next.js / React 19 frontend with Tailwind CSS, delivering subtle, high-polish interaction behaviors—TradingView-style OHLCV charts, real-time WebSocket price feeds with sub-100ms latency, and embedded wallet authentication via OAuth—improving user engagement by 45%.
- Modeled the off-chain data layer in Supabase (PostgreSQL) with Redis caching and Helius webhooks, enabling zero-gas listings where the first buy atomically triggers on-chain launch with race-condition fallbacks, reducing failed transactions by 80%.
- Partnered closely with designers and product managers in an Agile/Scrum environment to refine the create-and-buy flow end-to-end, reducing user friction by 35% (measured via funnel analytics), and authored comprehensive SDK documentation enabling independent integration by 3 external teams.
- Upheld engineering quality standards through unit and integration tests with Jest and Rust's testing framework, achieving 85%+ code coverage and reducing production bugs by 50%.

Full-Stack Developer Intern, Workleap — Montreal, QC Jan 2025 – May 2025

- Designed and integrated 20+ RESTful APIs during the migration from a legacy monolith to C# .NET microservices deployed on AWS with Docker and Kubernetes orchestration, improving system scalability by 3x and reducing deployment time from 2 hours to 15 minutes.
- Improved survey-creation usability by 30% (reduced user steps from 12 to 8) by building reusable React + TypeScript components for a redesigned custom survey flow shipped to 500+ enterprise customers.
- Optimized database queries and implemented Redis caching layers for high-traffic endpoints, reducing average API response time by 40% (from 250ms to 150ms) and decreasing PostgreSQL database load by 55%.
- Collaborated cross-functionally with product managers and designers in 2-week Agile sprints to translate ambiguous requirements into shipped survey experiences, iterating on user feedback through 5+ release cycles.
- Resolved 15+ critical production bugs and contributed to CI/CD pipeline improvements using GitHub Actions, production monitoring with Datadog, and peer code reviews to uphold operational health and engineering quality standards.
- Wrote unit and integration tests with xUnit and Jest, increasing test coverage from 60% to 82% and preventing 10+ regressions before production deployment.

Software Developer Intern, Matrox — Montreal, QC May 2024 – Dec 2024

- Built a Java + Spring Boot web application for a new IPKVM product backed by PostgreSQL and MySQL, improving device-configuration usability and reducing customer setup time from 45 minutes to 12 minutes (73% reduction).
- Extended 15+ RESTful API endpoints for OEM integrations using Java and Python, expanding product interoperability across 3 new hardware partners and accelerating customer adoption by 40%.

- Containerized application services using Docker and deployed to internal AWS environments, streamlining QA workflows and reducing environment setup time by 65%.
- Designed JUnit and Python (Pytest) automation test frameworks covering 200+ test cases, reducing regression bugs by 60% and cutting manual QA effort by ~25 hours per release cycle.
- Participated in Agile ceremonies including sprint planning, daily standups, and retrospectives, collaborating with a cross-functional team of 8 engineers and QA specialists.

Full-Stack Developer Intern, Root On — Montreal, QC Sep 2023 – Apr 2024

- Architected scalable RESTful APIs with Node.js, Express, and TypeScript supporting 10,000+ daily client/server requests, with role-based access control, JWT authentication, and OWASP security best practices.
- Built an AI-powered chatbot and personalized user profiles using NLP integrations and MongoDB, increasing user engagement by 50% and improving 30-day retention by 25%.
- Designed and optimized MongoDB and PostgreSQL database schemas, implementing indexing strategies that reduced query latency by 45% on high-traffic endpoints.
- Delivered features 2x faster than baseline sprint velocity through Agile collaboration, pair programming, and proactive code reviews across a remote 6-person engineering team.

FEATURED PROJECTS

Voyager — Hybrid CeFi/DeFi Multi-Asset Exchange (Backend) | Rust, Tokio, Actix-Web, PostgreSQL, SQLx, WebSockets, 0G, Docker, Kubernetes

- Engineered the Rust backend for a hybrid centralized–DeFi multi-asset exchange, building a Tokio matching engine with strict price-time priority, partial fills, and an in-memory balance ledger enforcing conservation and no-negative-balance invariants for sub-millisecond order matching.
- Designed the Actix-Web REST + WebSocket API—order, wallet, and market endpoints with real-time order-book, trade, and balance feeds—over a PostgreSQL 16 schema with hot-path indexing, plus a 0G decentralized-storage service archiving trades as Merkle-verified batches, validated by property-based tests and an end-to-end simulation across 10,000+ trades.

Echo — Multi-Platform Social Publishing Tool | TypeScript, Next.js 15, React 19, Node.js, PostgreSQL, Drizzle ORM, Redis, Docker | GitHub

- Built a multi-tenant Reddit/Discord publishing and scheduling platform (Turborepo/pnpm monorepo) with workspace-scoped PostgreSQL access enforced by Drizzle ORM and row-level-security policies, serving 100+ beta users.
- Implemented a queue-based scheduled-post engine using Redis and BullMQ (500+ posts/day) with OAuth integrations for Reddit and Discord APIs, containerized with Docker and deployed to AWS via GitHub Actions CI/CD at 99.5% uptime and sub-200ms p95 response times.

Project Management Application | React, TypeScript, Flask, GraphQL, PostgreSQL, Docker | GitHub

- Built a full-stack team collaboration platform with a typed React frontend over a GraphQL API and Flask + PostgreSQL backend, supporting task tracking, team workflows, and authenticated multi-user sessions for teams of up to 20 members.
- Implemented responsive design with Tailwind CSS, JWT-based authentication, role-based authorization, and unit testing with Jest and Pytest achieving 80%+ code coverage.

MoonNFT — On-Chain Marketplace for Physical Art (iOS) | React Native, iOS, NFC, Web3 / NFTs

- Helped build the MoonNFT iOS app in React Native—a marketplace for trading physical art as on-chain NFTs—implementing React Native NFC tag scanning that verifies each physical artwork's authenticity against its on-chain token.
- Developed the product's marketing website to support user acquisition and onboarding into the physical-art NFT marketplace.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, Rust, C#, Go, C, C++, SQL, HTML5, CSS3
Frontend: React, Next.js, React Native, Redux, Tailwind CSS, Accessibility (a11y), WebSockets
Backend: Node.js, Express, Spring Boot, Flask, Actix-Web, Tokio, .NET, REST APIs, GraphQL, Microservices, API Design
Databases: PostgreSQL, MySQL, MongoDB, Redis, Supabase, Drizzle ORM, SQLx, Database Optimization, Indexing
Cloud & DevOps: AWS (EC2, S3, Lambda, RDS), GCP (GKE), Docker, Kubernetes, CI/CD, GitHub Actions, Linux, Nginx
Testing: Jest, JUnit, Pytest, xUnit, Vitest, Property-Based Testing, Unit Testing, Integration Testing, TDD
Methodologies: Agile, Scrum, Code Review, Pair Programming, Sprint Planning, Jira, Confluence
AI & Blockchain: TensorFlow, PyTorch, LLM Integration, NLP, Solana Web3.js, Anchor, Smart Contracts, 0G
Security: OAuth 2.0, JWT, Role-Based Access Control (RBAC), Row-Level Security, OWASP Best Practices
